Assignment: Print Server Configuration in Windows Server

1. Install the Print Server Role and Add a Network Printer

Steps:

1. Open **Server Manager**.
2. Click **Manage → Add Roles and Features**.
3. Select **Role-based or feature-based installation**.
4. Choose the **local server** and click **Next**.
5. Under **Server Roles**, expand **Print and Document Services**.
6. Select **Print Server** and click **Add Features**.
7. Click **Next** and then click **Install**.
8. After installation, open **Server Manager → Tools → Print Management**.
9. Expand **Print Servers → Server Name → Printers**.
10. Right-click **Printers** and select **Add Printer**.
11. Select **Add a new network printer**. If a physical printer is unavailable, add **Microsoft XPS Document Writer**.
12. Complete the printer installation wizard.

Result:

The **Print Server role** is installed successfully, and the printer is added successfully in **Print Management**.

2. Configure Print Permissions

Steps:

1. Create two local user accounts:
 - User1
 - User2

2. Open **Print Management**.
3. Right-click the shared printer and select **Properties**.
4. Open the **Security** tab.
5. Remove the **Everyone** group if required.
6. Add **User1** and **User2**.
7. Configure the following permissions:
 - **User1**: Allow Print
 - **User2**: Deny Print
8. Click **Apply** and then click **OK**.

Result:

User1 can print documents successfully, while **User2** is denied permission to print.

3. Test Printing and Monitor the Print Queue

Steps:

1. Log in as **User1**.
2. Open **Notepad** and create a test document.
3. Print the document using the configured printer.
4. Open **Print Management** and view the printer queue.
5. Verify that the print job appears in the queue and is processed successfully.
6. Log in as **User2**.
7. Attempt to print the same document.
8. Observe the result in the print queue.

Observation:

User	Result	Reason
------	--------	--------

User1	Print job succeeds	User has Print permission.
-------	--------------------	----------------------------

User	Result	Reason
User2	Print job fails	User is denied Print permission.

Result:

Only the user with the required **Print permission** can submit and print documents. The denied user receives an **Access Denied** error or the print job is not accepted.

4. Change Print Job Priority

Steps:

1. Submit two print jobs:
 - One from **User1**
 - One from another allowed user
2. Open **Print Management**.
3. Open the printer queue.
4. Right-click the print job that you want to prioritize.
5. Select **Properties**.
6. Increase the **Priority** value, for example, to **99**.
7. Keep the other print job at a lower priority, for example, **1**.
8. Resume printing if the printer is paused.

Observation:

Although one print job was submitted later, the job with the higher priority is processed before the earlier job.

Result:

Print job priority successfully controls the order in which documents are printed.

5. Configure Permissions for Event Managers and Volunteers

Steps:

1. Create two local groups:
 - **Event Managers**
 - **Volunteers**
2. Add users to the appropriate groups.
3. Open **Print Management**.
4. Right-click the printer and select **Properties**.
5. Open the **Security** tab.
6. Configure the following permissions:

Event Managers:

- Allow **Print**
- Allow **Manage Documents**

Volunteers:

- Allow **Print**
- Do not allow **Manage Documents**

7. Click **Apply** and then click **OK**.

Testing: Event Manager

1. Log in as an **Event Manager**.
2. Print a document.
3. Pause a print job.
4. Resume the print job.
5. Cancel a print job.

Result:

The Event Manager can successfully print documents and manage print jobs.

Testing: Volunteer

1. Log in as a **Volunteer**.
2. Print a document.

3. Attempt to pause another user's print job.
4. Attempt to cancel another user's print job.

Result:

The Volunteer can print documents but cannot pause, resume, or cancel another user's print job because the **Manage Documents** permission is not granted.
